

# American Air Massage System

## Outstanding Massage!

Often the best ideas are the simple ones. Our system propels pre-warmed air through jets that are strategically positioned on the sides of your tub. A slight touch of the electronic control offers you a stimulating or gentle massage. Why is this feature pleasurable? Each member of your family can now benefit safely from the massage as millions of air bubbles surround and caress the body. Firm up and be refreshed as you relax in the comfort of your bathroom.

**To turn on system press the start button, it will take approximately 10 seconds for system to be at full speed.**

**Lateral Jets**

## Perfect Hygiene!

American Air Systems make hygiene a priority, and our air massage reflects this concern. This is why, it is entirely suitable for home, commercial or institutional application. They remain clean since no contaminated water can enter them and stagnate there. For additional protection thirty minutes after use the system initiates a five minute drying cycle that dries out the jet valves, thereby ensuring a longer life and perfect hygiene.
