American Air

MASSAGE SYSTEM

Outstanding Massage!

Often the best ideas are the simple ones. Our system propels pre-warmed air through jets that are strategically positioned on the sides or the bottom of your tub. A slight touch of the electronic control offers you a stimulating or gentle massage. Why is this feature so pleasurable? Each member of the family can now benefit safely from the massage as millions of air bubbles surround and caress the body. Firm up and be refreshed as you relax in the comfort of your bathroom.

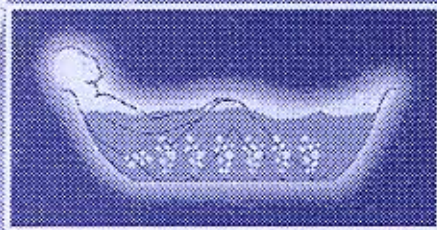

Perfect Hygiene

American Air Systems make hygiene a priority, and our air massage reflects this concern. This is why, it is entirely suitable for home, commercial or institutional application. Each jet has a built-in valve to prevent back flow in the air passage. They remain clean since no contaminated water can enter them and stagnate there. For additional protection, twenty minutes after use, the system initiates a one-minute drying cycle that dries out the jet valves, thereby ensuring a longer life and perfect hygiene.

Bottom Jets

This system remains the most popular, adapts to all tubs and meets all expectations. The jets are installed in the bottom of the tub and air is directly propelled on the body. This configuration allows a great variety of massages, including our air sequencer.
