

Bathtub Surface Heating System

****Call for Pricing****

Thermotherapy in the comfort of your home.

The comfort of being completely submerged in hot water has always been considered the ultimate pleasure in relaxation and home thermotherapy.

But what about the neck and shoulder area that often carries the most weight of our daily stress and fatigue? It is often quite complicated to get that much needed warmth to the area where tension accumulates the most.

In contact with the warmth of the bathtub surface, the skin chemoreceptors in the neck and shoulders release the endorphins necessary to sooth the aches and pains trapped in the trapeze muscles and eliminate the accumulated tension to induce complete and utter relaxation.

The keypad will light up when the Bathtub Surface Heating System is on. It has an automatic 30 minute timer that will turn the Bathtub Surface Heating System off.

Bathtub Surface Heating System Components

- ❖ The Bathtub Surface Heating System is controlled with a keypad that is integrated with an **automatic 30 minute timer**.
- ❖ The timer will run for 30 minutes and then automatically turns off. However if you want more time just turn it on again.
- ❖ Turn the Bathtub Surface Heating System on in advance before getting into the bathtub. No more than 10 minutes.
- ❖ **The Bathtub Surface Heating System can be used on any tub. (SOAKER TUB, Whirlpool, or Air)**
- ❖ Eco-friendly, the Bathtub Surface Heating System consumes less energy than a common 60 watt light

The innovative Bathtub Surface Heating System radiates comforting warmth through the backrest of your bathtub.
